### Testing `\hbadness`

Default value of `\hbadness` = 1000

Overfull hbox

The log: `\hbox (11.94066pt too wide) detected at line 51000000`

New value of `\hbadness` = 10000 (larger values no effect)

Overfull hbox

The log: `\hbox (11.94066pt too wide) detected at line 10`

Question: Why is the log message not suppressed because of `\hbadness`? No value of `\hbadness` makes the complaint disappear, not even 100000 or 1000000.
