

## 1 Arranging the pages

`\setuparranging[1*8]`

This results in a single-sided print of 8 pages.

## 2 How to Fold the booklet

The eight printed pages are folded in such a way, that while turning pages, no empty pages are visible.

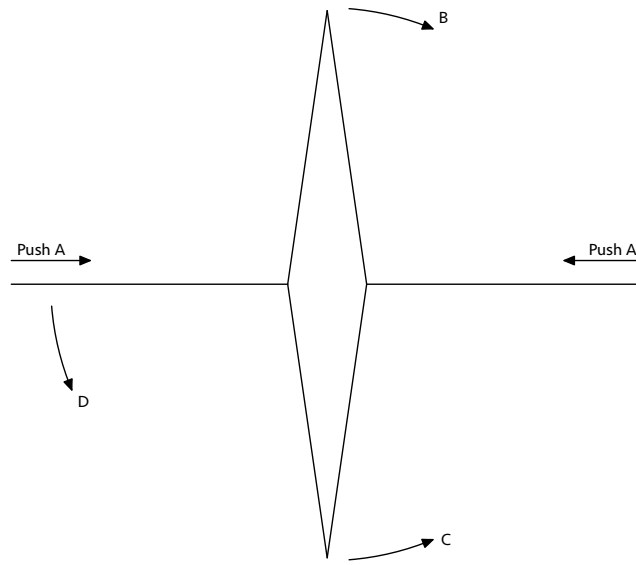

**Figure 1** The basic folding scheme

First make two mountain-folds as indicated with the straight lines in figure 1. Unfold the paper and turn it face up and  $90^\circ$  to the left. Make a valley-fold with the lower part of the sheet onto the previously made mountain-fold. Unfold and turn the sheet  $180^\circ$ . Make another valley-fold as described before. Unfold the sheet.

Take a sharp knife and a ruler. Cut the paper open between cutting point A and B (see figure 1).

Now we can fold the booklet. First, fold the paper again lengthwise. Then hold the double folded paper with the mountain-fold up. Push from both sides towards the center in order to get a form similar to figure 2. Then fold the upper double-page in direction B, the lower double-page in direction C and finally the lefthand double-sided page in direction D.

Before creasing the booklet at the spine it is worthwhile to put the section down on the table and adjust folds where needed. Finally the spine is creased preferably with a bone-folder.
